

# Net Zero Implementation Partner

## Is this you?

You're seeking grounded, real-world support in your net zero transition from audit to action. You need help developing implementation plans to meet your net zero targets. You want to make sure the energy and carbon savings from projects are maximised, and you want to understand the actual impacts on asset performance in relation to targets.

## Benefits abound

Following completion of the necessary audits, we can help identify packages of work which align with practical considerations, such as lease breaks, potential disruption to occupiers and existing capex plans. We can help you engage with occupiers, and provide guidance on refurbishments and fit-outs. We support on feasibility studies and provide technical oversight on the tender process to ensure projects are on track to deliver the necessary savings. Once implemented, we can help monitor the performance of projects, so you can prove progress towards your goals.

## The world is changing

As net zero targets draw ever closer, organisations must start to deliver. You need to understand which measures can be implemented in the short term, and what is required to pave the way for longer term projects. You must be able to build business cases for different measures. Once approved, you'll need to mobilise projects, then assess the performance of contractor proposals against your targets.

## How we help

Verco provides a combination of building engineering expertise, net zero experience and strategic thinking to help you turn your plans into reality. We work in partnership with you throughout the process, from making challenging asset-level decisions at the planning stages, to setting the technical parameters for projects at the implementation stage, then into operation.
